

Data management

What else can be managed in the management section?

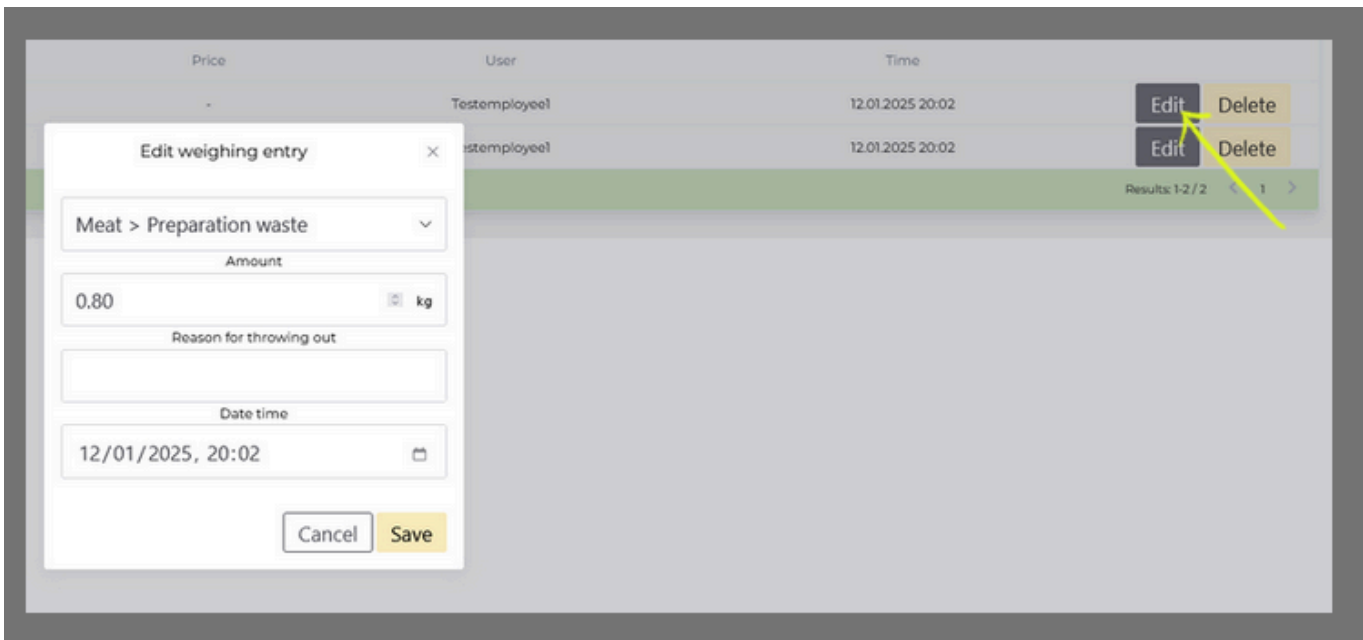

View and manage recorded waste data entries, including their associated classifier, amount, price, user, and time of entry.

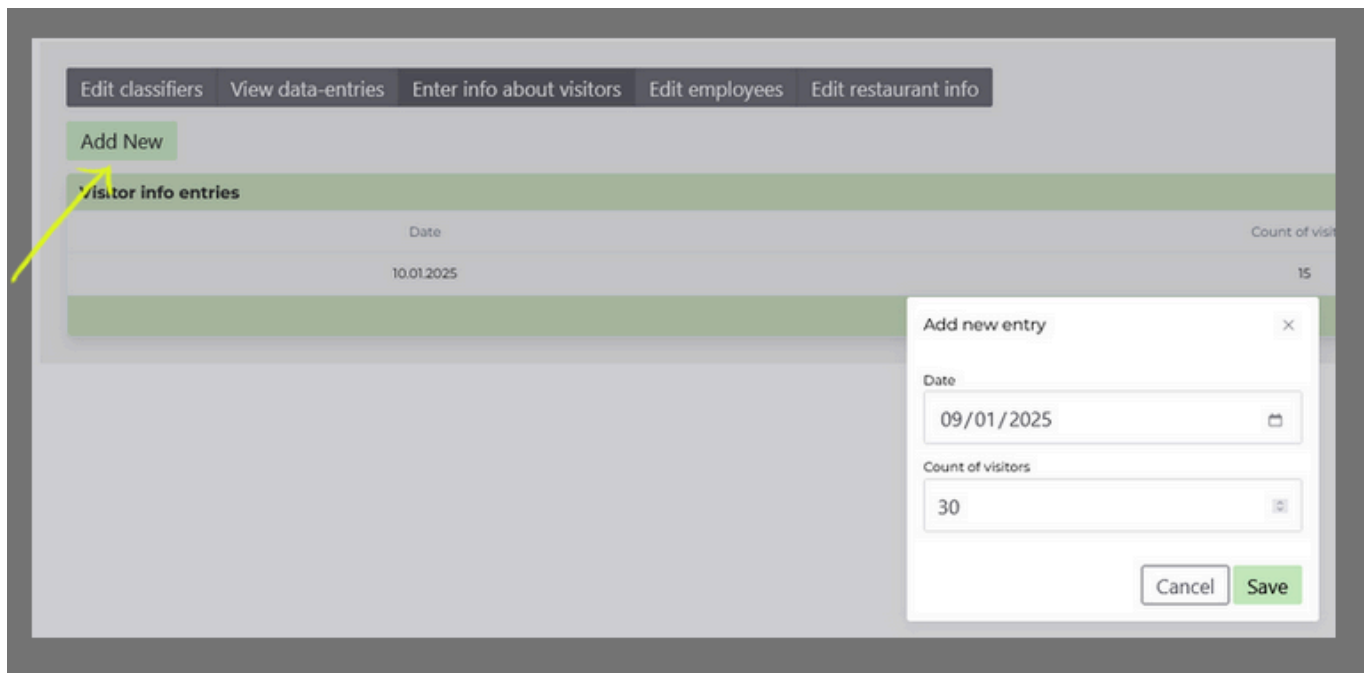

To edit a food waste data entry, click **"Edit"** next to the entry, make the necessary changes in the form, and click **"Save"**.

To delete a food waste data entry, click **"Delete"** next to the entry and confirm the action.

Steps to add visitor information

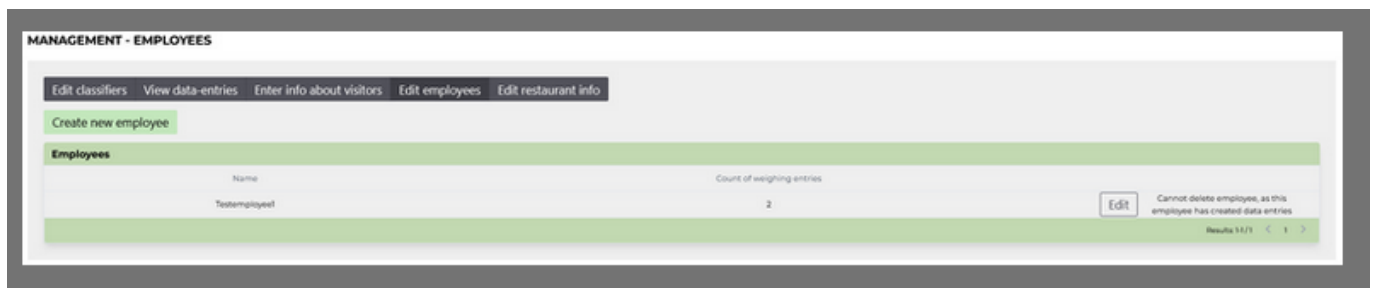

To add a restaurant guest number, click **"Add new"** and insert the number. The current date is offered by default.

To edit the restaurant guest number, click "Edit", enter the date and the number of guests, and click **"Save"**.

Manage employee records

Choose **"Create new employee"** button for adding new employee or **"Edit"** button for editing the existing employee. Employee records can be removed (**"Delete"**) button if no waste data is associated with the employee.

Manage restaurant information initially entered during setup

MANAGEMENT - RESTAURANT INFO

Edit classifiers View data-entries Enter info about visitors Edit employees Edit restaurant info

Restaurant name*

Testrestaurant2

Select UI language*

English (United States)

Note: Changing the language will NOT change the classifiers - they will stay in their original language.

Select currency*

€

Co2 base multiplier

This multiplier will be used for calculating Co2 (kg) generation from waste info. If left empty, Co2 calculation will not be done. Formula: Generated blowaste kilograms TIMES multiplier = generated Co2 kg

Weight id

XXXXXXXXXX

This ID will be used within the system to connect you to the weighing station. Leave this empty when you will use this without a weighing station.

Admin email*

youremail@yourdomain.com

Here will be sent alerts about various events that require the attention from the restaurant admin.

Save

Update **Restaurant Name** to reflect changes.

Set or **Modify UI Language** for the application interface.

Important! Changing the UI language after the restaurant has been set up does not affect the language of the initial classifiers. These will remain in the language that was selected during the initial setup.

Change **Currency** for financial calculations.

Adjust **CO2 Base Multiplier** for emissions tracking (optional).

Add or Update **Weight ID** to connect to a weighing station (optional).

Edit **Admin Email Address** for notifications and alerts.

Save updates by clicking the **Save** button.
